

Q: I've put a USB disk in my computer and it keeps changing the drive letters. How do I change it back?

A: When you plug in new drives windows automatically assigns a letter to it, but sometimes its not the one that you want. Here are the steps to change the drive letter:

1. Start->Settings->Control Panel->Administrative Tools
2. Click on "**Computer Management**"
3. Go into "**Storage**" -> "**Disk Management**" and select the drive that you want to change
4. Right click on the drive and choose "**Change drive letter and paths**"
5. Click "**Change**", select the letter that you wish to change to from the drop down
6. Click "**Assign the following drive letter**"
7. Click "**Ok**" and then "**Yes**" to the warning.

You will not be able to change the boot or system drive letter. Many Windows programs make references to a specific drive letter (eg. path variables). If you modify the drive letter, these programs may not function correctly.
